

# Municipal Class Environmental Assessment Additional Water Supply, Water Storage, and Pumping Facilities Class EA for the Community of Sunderland Notice of Study Commencement

Works Department

February 11, 2019

Public Notice

The Regional Municipality of Durham is undertaking a Class Environmental Assessment (Class EA) to plan for additional water supply, treatment, water storage capacity, and pumping facilities to service the Community of Sunderland. The additional capacity is required to provide a long term, secure and sustainable water supply system and to support growth forecasts to 2031 and beyond.

The Study will follow the Schedule 'B' Municipal Class EA Process as set out by the Municipal Engineer's Association. As one of the first steps, the Region will be considering and evaluating various alternatives for the additional water supply including improving existing water quality and quantity and securing a new water supply source(s). This will include the completion of a groundwater exploration program to drill and test new test wells. Drilling locations identified for consideration are presented on Figure 1.

There will be public consultations regarding the study and information on the consultations will be released as the study progresses. Public input is key as part of the Class EA process, therefore we encourage you to review the information posted on the Region of Durham's website and provide your comments at any time throughout the process. For more information about this project, visit [durham.ca/WorksProjects](http://durham.ca/WorksProjects).
